This report provides detailed information on the economic status of women in Northern Ireland from the most recent quarterly Labour Force Survey (LFS) in July – September 2016 (which has not been adjusted for seasonality). In addition, the report provides information from other sources in relation to available childcare provision and income support, educational standards of women and participation by women in politics and business.

The key points from the report are as follows:

- the female economic activity rate (16-64) increased by 3.5 pps over the last year to 69.9%.
- the NI employment rate for those females aged 16-64, (67.2%) was 2.7 percentage points (pps) lower than the rate in Great Britain (GB) (69.9%).
- median gross weekly wage for full-time females in NI was £475.1 at April 2016, while for full-time males the figure was higher at £505.9.
- the unemployment rate for women in NI was 3.7% - 3.6 pps below the male unemployment rate of 7.4%.
- in October 2016, 10,500 females in Northern Ireland were claiming unemployment related benefits - this represents a decrease of 1,600 during the last year.
- there were 178,000 women, aged 16-64, who were economically inactive in Northern Ireland in July – September 2016, with a resulting inactivity rate of 30.1% (26.3% in GB).
- In 2016 there were 57,393 day-care places for children aged under twelve in Northern Ireland, 13% higher than the level recorded in 2012.
- In 2014/15 girls left school with higher levels of academic qualifications than boys.
- Women tend to be under represented in politics and public life with fewer females than males in positions such as Members of the Legislative Assembly (MLAs), Ministers in the Executive and local councillors.
- The female Total Entrepreneurship Activity (TEA) rate in Northern Ireland stood at 3.4 per cent in 2015, (UK 4.7 per cent).
This Women in Northern Ireland report contains the following chapters:

1. Summary
2. Women in the labour force
3. Women in employment
4. Women in unemployment
5. Economic inactivity
6. Childcare provision and Income Support
7. Educational standards
8. Politics and public life
9. Women into business
10. Further information

National Statistics
National Statistics status means that official statistics meet the highest standards of trustworthiness, quality and public value.

All official statistics should comply with all aspects of the Code of Practice for Official Statistics. They are awarded National Statistics status following an assessment by the Authority's regulatory arm. The Authority considers whether the statistics meet the highest standards of Code compliance, including the value they add to public decisions and debate.

It is a producer's responsibility to maintain compliance with the standards expected of National Statistics. If we become concerned about whether these statistics are still meeting the appropriate standards, we will discuss any concerns with the Authority promptly. National Statistics status can be removed at any point when the highest standards are not maintained, and reinstated when standards are restored.
Economic activity

The LFS (July - September 2016) estimated that:

- the female economic activity rate (16-64) increased by 3.5 pps over the last year to 69.9%, and has increased over the last ten years by 6.2 pps.

- the female economic activity rate of 69.9% was 3.8 pps lower than that in GB (73.7%).

- at 69.9%, the working age economic activity rate for females was 9.1 pps lower than that for NI males (78.9%) compared with a difference of 10.8 pps five years ago, indicating an increase in female participation in the labour market.

- a total of 420,000 women aged 16+ were economically active in NI – an increase of 21,000 during the last year, and an increase of 55,000 compared to ten years ago.

Figure 1: Male and female employment rates (16-64), 2006 – 2016

Employment

The LFS (July - September 2016) showed that:

- the female employment rate (16-64) increased by 4.4 pps over the last year to 67.2% and has increased by 6.3 pps over the last ten years.

- the number of women in employment (16+) increased by an estimated 16% (to 404,000) when compared with the figure for 2006.

- the NI employment rate for those females aged 16-64 (67.2%) was 2.7 percentage points lower than the rate in GB (69.9%).

- the proportion of females (16-64) working full-time has decreased over the last ten years (by 2.4pps) to 59.7% whereas the proportion of males working full-time has fallen by 4.9 pps to 89.2%.
In terms of differences between males and females, the figures showed that:

- the female 16-64 employment rate in NI increased by 4.4 pps during the last year, while the male rate fell by 0.2 pps to 72.9%.
- the female employment rate in GB showed an increase over the year (0.7 pps), compared with an increase of 0.6 pps for their male counterparts.
- women in NI comprise 48.6% of those aged 16-64 currently in employment, slightly higher than the rate of 47.0% in GB.
- 72.9% of working age males were in employment compared with 67.2% of females.
- the gap between female employment rates and those of males has narrowed slightly compared to five years ago (63.8% for females and 71.3% for males).

**Earnings (source: Annual Survey of Hours and Earnings)**

The Annual Survey of Hours and Earnings showed that, at April 2016:

- median gross weekly wage for full-time females in NI was £475.1 while for full-time males the figure was higher at £505.9.
- the full-time ratio of female to male hourly earnings has increased, from 101.5% in 2015 to 103.2%.
- female full-time hourly earnings as a percentage of male hourly earnings continue to be higher in NI (103.2%), compared to the UK as a whole (90.5%).
LFS unemployment

The LFS showed that in July - September 2016:
- an estimated 16,000 women were unemployed in NI.
- the unemployment rate for women in NI was 3.7% - 3.6 percentage points below the male unemployment rate of 7.4%.
- the gap between male and female unemployment rates is similar to the same period five years ago when there was a 3.4 percentage point difference.
- the NI gap of 3.6% between male and female unemployment compares with 0.1% in GB.

Unemployment related benefits (source: Claimant count)

In October 2016:
- 10,500 females in Northern Ireland were claiming unemployment related benefits - this represents a decrease of 1,600 during the last year.
- the number of female claimants continues to be considerably smaller than the number of male claimants (23,500).

Figure 3: NI unemployment rates (16+), 2006-2016 (Quarter 3)

Economic Inactivity

At July – September 2016:
- there were 178,000 women, aged 16-64, who were economically inactive in Northern Ireland, with a resulting inactivity rate of 30.1% (26.3% in GB).
- eighteen percent of these economically inactive women (32,000) wanted a job (25% in GB), but did not satisfy the criteria of availability for work and actively seeking work to be classified as unemployed.
Childcare provision (source: Department of Health)

- In 2016 there were 57,393 day-care places for children aged under twelve in Northern Ireland, 13% higher than the level recorded in 2012.

Educational standards (source: Department of Education)

In 2014/15 girls left school with higher levels of academic qualifications than boys, with:
- 85% of girls leaving school with at least 5 GCSE grades A*-C, compared with 77% of boys
- 66% of girls leaving school with two or more A-levels compared to 49% of boys.

Politics and public life (source: The Executive Office)

Women tend to be under represented in politics and public life with most recent figures showing that:
- approximately one in four MLA’s in Northern Ireland were female
- 32% of councillors in local government districts were women
- there were 2 elected female MPs and 2 female MEPs in Northern Ireland.

Women in business (source: Invest NI)

- The female Total Entrepreneurship Activity (TEA) rate in Northern Ireland stood at 3.4 per cent in 2015, (UK 4.7 per cent).
Context

The Women in Northern Ireland report is an annual publication summarising key labour market statistics for females as well as additional information in relation to available childcare provision and income support, educational standards of women and participation by women in politics and business. As well as information from the Labour Force Survey (LFS), the claimant count and the Annual Survey of Hours and Earnings (ASHE), the report also incorporates data from the Department of Health, the Department of Education, the Executive Office and Invest NI.

Comparative UK data produced by the ONS are presented where these are available. The latest labour market statistics are available on the ONS website.

Key users of Northern Ireland labour market statistics include government departments, in particular the Department for the Economy (DfE), to design and monitor the impact of economic and labour market policy. Other Government departments such as the Executive Office, the Department of Finance (DoF) and the Department of Agriculture, Environment and Rural Affairs (DAERA), as well as bodies such as Invest NI and Belfast City Council, regularly require specific ad hoc labour market analysis in order to monitor policies for example, equality and employment. In addition, significant 'non-governmental' users of labour market statistics include the media, banks, academics, private consultants and the general public, primarily for reporting or researching the performance of the economy in general. Labour market statistics attract widespread media coverage, with a number of broadcasters publishing articles on the labour market on a monthly basis, generally on the day of publication of the Labour Market Report.

Labour market statistics feature in the DfE economic commentary which provides an overview of the state of the Northern Ireland economy, setting it in context with the UK and Republic of Ireland. The most up-to-date official statistics on the economy and labour market are available on the Economic Overview section of the website.

Further information on using labour market statistics can be found on the Office for National Statistics (ONS) website:
- Explaining the concepts of employment, unemployment and economic inactivity
- Interpreting Labour Market statistics
- Guide to Labour Market Statistics
- Glossary
Economic activity

The LFS showed that at July - September 2016, an estimated 420,000 women (16+) were economically active (employed or unemployed), which was:

- lower than the total number of males who were economically active (473,000).
- an increase of 14.9% since 2006, compared with a 5.4% increase for males. This compares to an increase in GB of 10.1% for females and an increase of 6.3% for males.

The figures showed that:

- married women made up 27.7% of the labour force, up 0.8 percentage points since 2006.
- in GB, married women comprised 23.6% of the labour force in 2016, compared with 24.3% in 2006.

The 16-64 economic activity rate for women in NI was 69.9%, which was:

- lower than the corresponding rate for men (78.9%). The GB rates were 73.7% for women and 84.1% for men.
- an increase of 2.2 pps over the last 5 years in NI and an increase of 3.5 pps over the last year. This compares with an increase of 0.6 pps for men over the last 5 years and an increase of 0.3 pps over the last year.
Economic activity by dependent children

In terms of dependent children, at April – June 2016:

- The economic activity rate for women, aged 16 – 64, with dependent children was 72.9%, compared with 66.0% for those without children. The GB proportions were 75.6% and 74.3% respectively.
- The economic activity rate was lower for women with three or more dependent children (64.9%) than those with one or two dependent children, which are 71.7% and 79.3% respectively.

Figure 7: Economic activity rate\(^1\) of women (16-64) by number of dependent children, April - June 2016

\(^1\) The analysis on the effect of dependent children (under 19) on the economic activity rates of females is based on the head or partner of the head of family unit only. It does not include family members who are of working age but who do not have parental responsibilities such as an elder sibling.
Economic activity rates for female heads of family were found to be influenced by the age of the youngest dependent child, with:

- a rate of 71.6% when the youngest dependent child was aged 0-4, which was 2.4 pps lower than the rate when the youngest dependent child was 16-18 (74.1%). In GB, the rates were 67.9% and 82.3% respectively.

**Figure 8:** Economic activity rates of women (16-64) by age of youngest dependent child, April – June 2016
Employment (sources: Labour Force Survey, Quarterly Employment Survey and Annual Survey of Hours and Earnings)

At July - September 2016, the estimated number of women (16+) in employment was 404,000, which
- has increased by an estimated 16% from 350,000 in 2006, compared to an increase of 3% for men. There was a 11% increase in GB over the same period, compared to 7% for men.
- accounted for 48% of those currently in employment, similar to the proportion for GB (47%).
- consisted of 363,000 employees (90%), 34,000 self-employed (8%) and a small number on government training and employment schemes or unpaid family workers. In GB 89% of women in employment are employees, 11% are self-employed with less than 1% on government training and employment schemes or unpaid family workers.

Figure 9: Number in employment (16+), 2006 – 2016

The employment rate for women aged 16 to 64 was 67.2%, which was:
- an increase of 6.3 pps over the last 10 years and of 4.4 pps over the last year.
- lower than the male employment rate (72.9%), which decreased by 1.7 pps over the last 10 years and by 0.2 pps over the last year.
- lower than the working age employment rate for women in GB (69.9%), which increased by 2.9 pps over the last 10 years and increased by 0.7 pps over the last year. The corresponding male rate (79.7%) increased by 0.1 percentage points over the last 10 years and by 0.6 percentage points over the year to July – September 2016.
Figure 10: Types of employment (16+), July – September 2016

* Sample size too small for a reliable estimate

Employment by category
In terms of the type of job:
- women account for 51% of all employees, but only 27% of the total self-employed. In GB the figures are 49% and 33% respectively.
- employer based surveys estimate that 51% of all employee jobs are filled by women. (Source June 2016 Quarterly Employment Survey).

Figure 11: Types of employment by gender, July – September 2016
Employment by working pattern

In terms of working patterns:
- 6% of women in employment work at or from home, compared with 11% in GB.
- the proportion of females (16-64) working full-time has decreased over the last ten years (by 2.4 pps) to 59.7% whereas the proportion of males working full-time has fallen by 4.9 pps to 89.2%.
- 40% of female employees work part-time compared to 12% of male employees. The figures are similar for GB, at 41% compared to 12% respectively.
- 79% of part-time employees are women, compared with 77% in GB.
- the number of female part-time employees is up 19% since 2006 (5% in GB), and the number of female full-time employees rose by 8% (8% in GB).

Figure 12: Full-time/part-time split of employees, July – September 2016

Looking in more detail at working patterns:
- 73% of female employees who worked part-time reported that they did not want a full-time job, compared to 76% in GB.
- 9% of female and 5% of male employees were temporary, compared to 7% of females and 6% of males in GB.
- 43% of female employees and 14% of male employees are not in full-time permanent jobs, the similar proportions as in GB. Which were 43% and 16% respectively.

Figure 13: Reason for female employees working part-time, July – September 2016

"Other reasons" comprise being a student, illness or disability.
Employment by industry

Of the total female employees:

- 90% worked in the service sector (92% for part-time and 89% for full-time). This compares with 66% for male employees. In GB 92% of female employees (95% for part-time and 90% for full-time) worked in the service sector.
- Of all female full-time employees, 51% were employed in the public administration, education and health service sectors, compared with 18% of males. The respective figures for GB were 47% for females and 19% for males.
- The other main work areas for female full-time employees in the service sector in NI were distribution, hotel & restaurants (16%) and banking & finance services (14%). For males the figures were 19% and 13% respectively. In GB, 17% of females and 18% of males were in banking & finance services. For distribution, hotel & restaurants, the figures were 15% for females and 16% for males.
- 9% of female full-time employees worked in manufacturing compared to 23% of men. In GB, 7% of females and 17% of males were in manufacturing.

Figure 15: Employees by industry sector, July - September 2016

Female - “All other” comprises agriculture, forestry and fishing, energy and water, construction and manufacturing.
Male - “All other” comprises agriculture, forestry and fishing, energy and water.
Employment by occupation

Type of occupation differed between male and females in NI, with figures showing that:
- 56% of all professional occupations were women, compared with 50% in GB.
- 77% of all those employed in administrative and secretarial occupations were women compared with 76% in GB.
- 22% of female employees were in professional occupations, compared with 18% of men. In GB, the figures were both 21% for females and males.
- 20% of female employees were in administrative and secretarial occupations, compared with 6% of men. The figures were similar for GB - 17% of women and 5% of men.

Figure 16: Occupation of male and female employees, July – September 2016

Earnings (source: Annual Survey of Hours and Earnings – ASHE)

Earnings by sex

Earnings figures for NI showed that:
- the median gross weekly wage for full-time females at April 2016 in NI was £475.1 while for full-time males the figure was higher at £505.9.
- the full-time ratio of female to male median hourly earnings excluding overtime has increased to 103.2% (from 101.5% in 2015).
- female full-time hourly earnings as a percentage of male hourly earnings continue to be higher in NI (103.2%), compared to the UK as a whole (90.5%).
Earnings by public / private sector

The figures showed differences between the public and private sector in NI, with:
• higher median gross weekly earnings for women working full-time in the public sector (£593.7) than in the private sector (£365.0).
• a larger increase in earnings of full-time female employees in the private sector over the year (5.7%) compared to the increase in the public sector (3.9%).

In July – September 2016, the LFS estimated that:

- 16,000 women (16+) were unemployed compared with 35,000 men.
- in GB, 758,000 women and 882,000 men were unemployed.
- the number of female unemployed is similar to 2006, while the number of male unemployed has increased by 40%.
- in contrast, female unemployment in GB has increased by 2% while male unemployment decreased by 10%.

**Figure 20: Unemployed (16+), 2006 - 2016**

LFS unemployment rate
In July – September 2016, the unemployment rate (unemployed as a percentage of the economically active):

- for women aged 16+ in NI was 3.7% compared with 7.4% for men.
- in GB was 5.0% for women and 5.1% for men (16+).
- for women aged 16-64 was 3.8%, compared with 5.1% in GB.
- 22,000 people or 43% of the unemployed were long-term unemployed (one year or more) at July – September 2016.
Figure 21: Female unemployment by duration, July – September 2016

* Sample size too small for reliable estimate

**Claimant count** (source: Claimant count)

**Claimant count:** The NI claimant count consists of all people claiming Jobseeker’s Allowance (JSA) at Jobs and Benefits offices. They must declare that they are out of work, capable of, available for and actively seeking work during the week in which their claim is made. From June the GB claimant count includes JSA claimants and out-of-work claimants of Universal Credit.

**Percentage of workforce:** This measure expresses the number of claimants as a percentage of workforce jobs plus claimants. Workforce jobs are the sum of employee jobs, self-employment jobs, HM Forces, & government-supported trainees. This measure is only available at the NI level.

**Residence-based proportions:** This is the official measure below national/regional level. It expresses the number of claimants as a percentage of the population aged 16-64, sourced from the mid-year population estimates. This measure is used for sub regional analysis.

In October 2016:

- 10,500 or 2.5% of women in the workforce claimed unemployment related benefits compared with 23,500 or 4.8% of men.
- In GB, the figures were 277,190 or 1.7% for women and 492,068 or 2.8% for men.
- The female rate of 2.5% was lower than the previous month’s rate (2.6%) and lower than the rate one year ago (2.9%).
- In GB the female rate of 1.7% was the same as the previous month’s rate (1.7%) and the same as the rate one year ago (1.7%).
- 67.7% of women in NI who were out of work and claiming unemployment related benefits had been unemployed for up to one year, 23.5% for over one year but less than three years, and 8.9% for three years or more. In GB, the respective figures for woman were 73.3%, 16.9% and 9.8%.
- the figures for men in NI were 62.5%, 25.4% and 12.1% respectively, compared with 65.8%, 19.7% and 14.5% for men in GB.

Figure 22: Claimant count by duration, October 2016

Of women claimants, 25.1% are aged under 25, 48.3% are aged 25 to 49 and 26.6% are aged 50 and over. Of male claimants, 24.9% are aged under 25, 52.0% are aged 25 to 49 and 23.1% are aged 50 or over. [In GB 12.2%, 59.2% and 28.6% for women, compared with 12.7%, 56.1% and 31.1% for men.]

Figure 23: Claimant count by age group October 2016
In the period July – September 2016, the LFS showed that:

- 328,000 women and 235,000 men aged 16 or over are economically inactive. This compares with 331,000 women and 203,000 men in 2006 – a decrease of 1% for women and an increase of 16% for men.

- Between 2006 and 2016, the number of economically inactive women in GB increased by 4% from 10.4m to 10.8m while the number of economically inactive men increased by 17% from 6.4m to 7.5m.

**Figure 24: Economically inactive (16+) 2006-2016**

The figures show that:

- the 16-64 inactivity rate for women has decreased by 2.2 pps over the last 5 years and decreased by 3.5 pps over the last year to 30.1%. The corresponding male rate (21.1%) has decreased by 0.6 pps over the last 5 years, and decreased by 0.3 pps during the last year.

- the 16-64 inactivity rate for women in GB has decreased by 2.5 pps over the last 5 years and over the last year by 0.4 pps to 26.3%. The corresponding male rate (15.9%) has decreased by 0.9 pps over the last 5 years and decreased by 0.2 pps over the year to July – September 2016.

Economically inactive can be broken down by those who do or do not want to work, showing that:

- of the 178,000 women, aged 16-64, who were economically inactive in NI, 18% (32,000) wanted a job, but were not seeking work in the past four weeks or were unable to start work. The remaining 82% stated that they did not want work. For economically inactive men of working age (16-64), 20% wanted a job and 80% did not want work.

- in GB 75% of economically inactive women did not want work, while 25% did want work but were not seeking work in the past four weeks or were unable to start work.
• 32% of working age inactive women were unavailable for work due to family/home commitments. The main reason given by men for inactivity was those who were sick at 37%, compared to 27% for women.

• The other main reason for inactivity was those who were students, with 19% of working age inactive women citing this as their reason for inactivity, compared to 37% of men.

Figure 25: Reasons for economic inactivity (16-64), July – September 2016

“Other” includes the ‘retired’ and ‘discouraged workers’ (those not in a job who would like work and whose reason for not seeking work in the past four weeks is that they believe there are no jobs available).
Day care places (source: Department of Health)

In Northern Ireland people who look after children aged under twelve years have been required to register since November 1996. The figures show that at 31st March 2016:

- the overall number of day care places in NI was 57,393 – up 3% from the level recorded in 2012 (55,914).
- there were 14,757 day nursery places in 2016 – an increase of 8% from the 2012 figure of (13,613).
- there were 17,559 places with registered childminders in 2016 – down 18% from the level in 2012 (21,315).
- there were 12,165 playgroup places in NI in 2016 – up 2% from 2012 figure (11,885).
- there were 10,011 places available in ‘out of school clubs’ in 2016 – up 65% from 2012 (6,075).
- there were 2,901 places available in ‘other organisations’ in 2016 – down 4% from 2012 (3,026).

Figure 26: Day care places in Northern Ireland by type in 2012 and 2016

1 Other organisations includes crèches, summer schemes and two year old programmes.
Childcare charges (source: HM Revenue and Customs)

- In Northern Ireland at 2 November 2016, 15,420 families were receiving higher Child and Working Tax Credits awards to help with childcare charges. The corresponding figure for the UK was 389,125.

- The average weekly amount of childcare charges (capped at £175 per week for one child and £300 per week for two or more children) paid in Northern Ireland was £111 and the average weekly increase in Child and Working Tax Credits awards was £75 for families benefiting from the childcare element. (£91 and £60 in the UK respectively.)

Income Support (source: Department for Communities)

- At May 2016, there were 76,980 women claiming Income Support/State Pension Credit, this accounted for 64.6 % of all cases. The overall number of women claiming Income Support/State Pension Credit has decreased by 3.1% since May 2015, compared with a 4.7% decrease in the number of male claimants over the same period.

- A total of 20,460 (53.0%) Income Support claimants were classified as Lone Parents, the majority of these were women (97.5%). The overall number of lone parents has decreased by 7.0% or 1,530 lone parent claimants since May 2015.

- A higher proportion of women (66.8%) than men (64.6%) had been claiming Income Support for two years or more. The difference was particularly marked in the 18-24 years age group with 29.4% of men claiming for two years or more compared with 48.7% of women.

Please note figures are rounded to the nearest ten.
Educational standards (Source: Department of Education)

The School Leavers Survey 2014/15 reported that:

- girls continue to outperform boys in terms of qualifications achieved, with 45.7% of girls achieving at least three A levels A*-C or equivalent on leaving school compared with 31.1% of boys, and 66.2% of girls achieving two or more A levels A*-E or equivalent in 2014/15 compared with 49.5% of boys.
- over two thirds (70.5%) of girls achieved at least five GCSEs at grades A* - C or equivalent including GCSE English and maths compared with 61.6% of boys, a difference of 8.9 percentage points.
- as in previous years, the proportion of girls leaving school with at least five GCSEs or equivalent at grades A* - C remains higher than the proportion of boys; 85.4% of girls leaving school in 2014/15 achieved this standard compared with 76.9% of boys.
- after leaving school 83.0% of girls progressed to further or higher education compared with 71.9% of boys.

Higher education (Source: Higher Education Statistics Agency)

The figures for 2014/15 showed that:

- 56% of all students enrolled at the NI Higher Education Institutions (HEI) were women. Of all enrolments at NI Further Education colleges, 49% were female.

Figure 28: Enrolments in NI HEI and in NI FE colleges, 2014/15
Subject choice in Higher Education (source: Department for the Economy)

For full-time, first year undergraduate enrolments at NI HEI, the subject areas with the highest proportions of females in the 2014/15 academic year were:

- subjects allied to medicine (82%), education (82%) and languages (74%)

And the subject areas with the lowest proportions of females were:

- engineering and technology (19%), architecture, building and planning (23%) and computer science (25%).

Figure 29: Enrolments of full-time undergraduate first year students at NI HEI by gender and subject area - 2014/15

1 Source: Higher Education Statistics Agency
2 NI universities includes Queen’s University Belfast, the University of Ulster, Stranmillis University College and St Mary’s University College. With respect to student enrolments, from the 2014/15 academic year onwards, DfE no longer counts the OU as a wholly English institution, but splits it between England, Northern Ireland, Scotland and Wales, depending on where the national centre is located.
3 Other science courses include biological sciences, veterinary science, agriculture & related subjects, physical sciences, mathematical sciences, computer science and engineering & technology and architecture, building & planning.
4 Non science subjects include social studies, law, business & administrative studies, mass communications & documentation, languages, humanities, historical & philosophical studies, creative arts & design, education and combined studies.

NI Higher Education Institutions (HEI)

Analysis of gender in first year under graduate enrolments at NI HEI shows that in 2014/15:

- in the first year medicine & dentistry and subjects allied to medicine, 79% of full-time undergraduates at the NI HEI were female.
- of those full-time undergraduates enrolled in the first year of other science courses at the universities 34% of students were female.
- in the first year of the non-science subjects 58% of full-time undergraduates at the NI HEI were women.
NI Further Education College

For regulated enrolments at Northern Ireland Further Education colleges, the subject areas are similar to those in Higher Education. Subjects with the highest proportions of females enrolled were:

- allied to medicine (87%), social studies (84%) and creative arts & design (78%).
  And the subject areas with the lowest proportions of females were:
- mathematics & Computing Science (41%), engineering & technology (6%) and architecture, building & planning (3%).

Analysis of enrolments at Northern Ireland Further Education colleges reveals that:

- in non science subjects\(^6\), 56% of all enrolments at Further Education colleges were women (2014/15).
- of the total enrolments on the other science courses\(^7\) at the NI Further Education Colleges, 28% were female (2014/15).

\(^6\) Non science subjects include social studies, business & administration documentation, mass communications & documentation, languages, humanities, creative arts & design, education and combined studies.

\(^7\) Other science courses include biological sciences, agriculture & related subjects, physical sciences, mathematical sciences, computer science and engineering & technology and architecture, building & planning.

Note: FE enrolments relates to full-year Regulated enrolments for the 2014/15 academic year. Regulated enrolments’ are regarded as those on courses that are at ‘level 3 or below’ and appear on the Register of Regulated Qualifications (RRQ), which contains qualifications on both the Qualifications and Credit Framework and the National Qualifications Framework or part of the Department’s Prescribed List of Approved Qualifications (PLAQ)/Access list) and Higher Education qualifications (‘level 4 and above’). Only Level 3 and below have an RRQ Code.
The 2014 local elections to the 11 new councils took place on 22 May. Of the 462 candidates elected, 116 were women (25%). In addition:

- results from the local elections to the 11 new councils show that Belfast City Council had the highest female representation with 19 out of 60 (32%) of female councillors.

- of the 11 new councils, 4 had a female chief executive.

- Northern Ireland had two elected women MPs (representing 11% of all NI MPs). In addition, two of the three Northern Ireland MEPs were female. This compares with 30% of MPs and 40% of MEPs in GB.

- elections to the Northern Ireland Assembly took place on the 5 May - of the 108 elected members, 30 (28%) were women.

- in Northern Ireland at 31st March 2015, 38% of public appointments (to the Board of a public body) were held by women. This compares with 34% in 2010.

- In Northern Ireland at 31st March 2015, 22% of chair posts for public appointments (to the Board of a public body) were held by women.

- as of 1st December 2016, 4 of the 10 Ministers in the Northern Ireland Executive were female.

Women into business (source: Invest NI, Global Entrepreneurship Monitor (GEM) 2015 NI report)

Levels of female entrepreneurship
Invest NI figures show that:

• The female Total Entrepreneurship Activity (TEA) rate in Northern Ireland stood at 3.4 per cent in 2015 (UK 4.7 per cent).

• In Northern Ireland, England, Wales and the UK as a whole, males had significantly higher TEA rates than females. Neither the male nor female TEA rates in NI differed significantly from the other home nations’ respective rates.

• The ratio of female to male early-stage entrepreneurial activity varied little across the four home nations. The ratio in Northern Ireland at 46 per cent was the lowest of all the home nations in 2015, although not significantly different. Northern Ireland, as in previous years, has the lowest ratio of female to male TEA (46%) which was on a par with England (47%) and not far below the UK average of 49%. The ratios in both Wales and Scotland were above the UK average at 52% and 77% respectively.

Figure 32: Total early-stage female entrepreneurial activity in Northern Ireland and the UK, 2002-2015 (Source: GEM APS)

• Historically female TEA rates in Northern Ireland have generally matched the UK trend, albeit at very different levels. Since 2011 there has been a divergence in the two series, although in 2014 the gap appeared to be returning to the long-run average.
Alongside the above, the challenge of economic inactivity and the number of females currently inactive, calibrates with the value in sponsorship of female focused activities.

In 2015, Invest NI has identified that some 38% of the business plans completed through the Regional Start Initiative (RSI) were by females.

In April 2015, under Local Government Reform, responsibility for the delivery of support for female entrepreneurship transferred to the new 11 councils.
Definitions

In Employment
Those aged 16 and over who did some paid work in the reference week (either as an employee or self-employed); those who had a job which they were temporarily away from (on holiday for example); those participating in government training and employment programmes; and those doing unpaid family work.

Employees
The division between employees and self-employed is based on survey respondents’ own assessment of their employment status.

Unpaid Family Workers
Persons doing unpaid work for a business they own or a business that a relative owns.

Full-time/Part-time
The classification of employees, self-employed, those on government work-related training programmes and unpaid workers in their main job as full-time or part-time is on the basis of self-assessment.

Economically Active
People aged 16 or over who are either in employment or ILO unemployed.

Economic Activity Rate
The percentage of people in a specified age group who are economically active.

Economically Inactive
People who are neither in employment nor unemployed. This group includes, for example, all those who were looking after a home or retired.

Employment Rate
The percentage of people in a specified age group who are in employment.

Unemployment
The International Labour Organisation (ILO) measure of unemployment used throughout this statistics notice refers to people without a job who were available to start work in the two weeks following their LFS interview and had either looked for work in the four weeks prior to interview or were waiting to start a job they had already obtained. This definition of unemployment is in accordance with that adopted by the 14th International Conference of Labour Statisticians and promulgated by the ILO in 1987.

Unemployment Rate
The percentage of economically active people who are unemployed.

Duration of Unemployment
Duration of unemployment is defined as the shorter of the following two periods: duration of active search for work; and length of time since employment.
The short-term unemployed are those people who have been unemployed for under 1 year, while the long-term unemployed are defined as those who have been unemployed for 1 year or more.
